

The X-Resource application allows individuals to check for availability of shared items such as projectors, TVs, recordings equipment, etc., from an IP Phone and then reserve that equipment. This removes the need to have reception and admin staff make time to create and check reservations. It also removes that floating piece of paper with reservations that never seems to be where it is supposed to be.

This application allows for self management of all your equipment and reduces workload on staff. You can easily update it with new equipment and remove old equipment as needed.

The application is accessible anywhere within the organization from an IP Phone display.

Summary:

- Browse resource reservations
- Create equipment reservations
- Easily add additional equipment

X-Resource Technical Specifications:

Minimum Server Requirements

Single or Dual 2.4 GHz Processor
1 GB RAM Min.
10 GB System Storage

Software Requirements

Windows 2003 Server (SP2 or above)
Application Server (Windows Components)
ASP
IIS 6.0
